A dosing pump on its own is not a complete chemical feed system. The extensive accessories program of Lutz-Jesco converts your dosing pump into an efficient dosing system. Should you have any additional requests: We always find a solution.

A pattern of success

1. Injection fittings
   Help to inject the chemical delivered by the dosing pumps into the system to be treated.

2. Electrical degassing device GAS-EX
   Ensures that the pump is automatically vented in easy selectable intervals.

3. Multifunction valve PENTABLOC
   Combines five functions necessary to ensure accurate and safe operation of small capacity dosing pumps: back pressure, antisiphon, safety relief, pressure relief and dosing monitoring.

4. Valve assembly
   Are used to increase the dosing accuracy and to protect the pump and system against excessive pressure.

5. Pulsation dampener PDS
   Reduces pressure fluctuations and protects the pump and the system.

6. Flow sensor FLOWCON
   Supervises the flow rate and the function of the dosing pump and indicates a failure or loss of capacity of the dosing pump.

7. Electric agitators JR and hand mixers
   Agitators are useful armatures in order to mix or dissolve the media to be dosed homogenously. For simple mixing operated mixers are recommended.

8. Priming aids
   Priming becomes easy because the dosing head is supplied directly with liquid.

9. Suction lines
   Are available as flexible and rigid version, the length is adjustable, also equipped with integrated level controls. Special suction lines are available for transport containers.
